www.ndieurope.com

#### **Innovations in medical surgery and therapy - this is what we are committed to.**

Leading medical technology companies around the world rely on the 3D navigation technologies from NDI - the market leader for more than 20 years. Our competence as an innovative high-tech company supports the implementation of modern, digital solutions in medical fields of application and is a central component of our success.

#### INSIDE

People work for NDI at four locations around the world. The cultural diversity in our successful company and the requirements of our global customers ensure a motivating work environment. The knowledge, enthusiasm and experience of our employees are essential for our success. We know each other by name - including our colleagues in Canada, the USA and Hong Kong. We trust, respect and are honest with each other.

#### TASKS

- One of your core tasks in our team is to create concepts for low-noise analog circuits from the given requirements
- You also develop simulations of concepts and design circuit diagrams
- Additionally, you can also support us with the layout for an EMC-compliant circuit layout
- It would be ideal if you also commission the production of PCB prototypes
- Commissioning circuits and verifying them is easy for you
- You create documentation according to standard requirements without problems as well as in English

#### PROFILE

- You have a university degree in electrical engineering or a comparable degree in your pocket
- A few years of professional experience in the development of electronic circuits and with computer aided engineering tools would be ideal
- You bring along know-how in the design of low-noise electronics - if you are also familiar with simulation, that would be perfect
- You are very familiar with the common CAD tools
- You enjoy working in a team and using agile methods
- You are fluent in German and English to be able to communicate with our colleagues anywhere in the world
