Innovations in medical surgery and therapy - this is what we are committed to.

Leading medical technology companies around the world rely on the 3D navigation technologies from NDI - the market leader for more than 20 years. Our competence as an innovative high-tech company supports the implementation of modern, digital solutions in medical fields of application and is a central component of our success.

INSIDE

People work for NDI at four locations around the world. The cultural diversity in our successful company and the requirements of our global customers ensure a motivating work environment. The knowledge, enthusiasm and experience of our employees are essential for our success. We know each other by name - including our colleagues in Canada, the USA and Hong Kong. We trust, respect and are honest with each other.

TASKS

In our Research & Development department we develop new technologies for the production and testing of sensors and tools. For this we need you as support for our team:

- Understanding requirements for applications for customers and translating them into a technical concept is familiar territory for you
- In addition, you will clarify with our suppliers, for example, the selection and procurement of materials, organize prototype construction and test initial samples.
- You release newly developed products: for us, this specifically means carrying out verification and validation, naturally considering the requirements in the medical environment in accordance with ISO 13485.
- The determination of technical data for project specifications and data sheets is in your hands, as well as the preparation of documentation for testing and our production
- We also look forward to your support in change management!

PROFILE

- After your bachelor's or master's degree in process engineering, science, arts, or engineering, you have already worked in development for several years
- Dealing with different issues and finding solutions is the challenge you enjoy. For us, that would be joining/adhesive technology, plastics, electronics, assembly and connection technology, plug-in connections, data lines, measurement technology and, of course, sensor technology.
- You are comfortable working in multidisciplinary teams and appreciate working in an agile environment
- You have a very good command of German and English in order to be able to communicate with our colleagues, customers, and suppliers anywhere in the world
