INSIDE

Hidden Champion in medical technology - we are proud of this!

Leading medical technology companies worldwide rely on our 3D tracking technology - we have been the global market leader in this field for over 25 years. Our expertise as an innovative high-tech company for the realization of modern, digital solutions in medical application fields is a central component of our success.

People work for NDI at four locations worldwide. The cultural diversity in our globally active company and the demands of the high-tech medical industry make for a stimulating work environment. The knowledge, enthusiasm and experience of our employees are essential to our success. And everyone knows everyone by name - including our colleagues in Canada, the USA and Hong Kong. We trust each other, are honest with each other and can celebrate with each other. And we do it across hierarchies - that's what makes work fun!

TASKS

In our R&D department, you will work in an agile development team to prepare the software landscape for our production to meet the challenges of a rapidly growing company:

- Your main task is to create and maintenance software for testing and characterization of our sensors and devices in production. You value user-friendliness, robustness, performance, and maintainability of the applications
- You will provide our colleagues in production with help and advice on the transfer of applications and support them with questions and problems
- You value modularity so that maintenance or expansion by colleagues is easily possible
- You will analyze existing systems in our production and develop proposals for changes in the area of technology or quality
- Documentation, verification, and validation of the developed software is an important part of software development for us in the medical field, which is why you will be actively involved here

PROFIL

- You are well prepared for your new task thanks to a successfully completed university degree in computer science or a similar field or training as an IT specialist for application development - even if you are just starting out on your career
- You are familiar with Programming in Python, C++ would be a nice-to-have, but is not a requirement
- If you are also knowledgeable in one of the following areas, that would be good but not mandatory: version control with GIT or SVN
- Agile work also makes you curious or is exactly what you enjoy doing
- You are fluent in German and English in order to be able to communicate with our colleagues anywhere in the world
